

Expert Guidance. Exceptional Cooling.

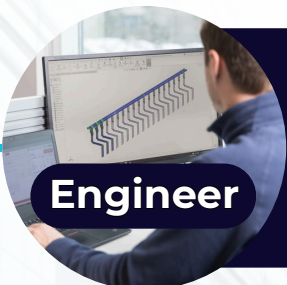

Complete solutions. From liquid cooling system design to installation and support in over 70 countries worldwide.

Maximize efficiency and reliability with our expert liquid cooling and critical infrastructure services. From design and deployment to ongoing support, we ensure your data center's liquid cooled servers operate at peak performance. Whether you're upgrading existing systems or implementing cutting-edge cooling solutions, our team delivers seamless project execution and long-term reliability.

Turn the page to connect the dots on CoolIT's end-to-end liquid cooling data center services.

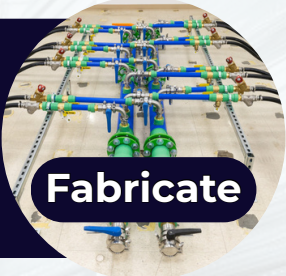

The World Leader in Liquid Cooling Systems
for AI and High Performance Computing.

Engineer

System design, facility assessment, equipment selection, and Technology Cooling System Loop (TCS) and site layout design.

Fabricate

Material selection, TCS fabrication, piping and valve train selection, and scheduling for seamless project execution.

Install

On-site TCS construction, liquid cooling installation, testing, and validation, including pressure testing and flushing.

Commission

Inspection, electrical and control system checks, CDU startup and setpoint configuration, rack integration testing, and thermal performance validation.

Handover

Final checks, system acceptance, documentation, and training are included.

Maintain

Comprehensive support services include scheduled preventative maintenance, break/fix repairs, flexible warranty options in over 70 countries.
